WORK EXPERIENCE

Backend Engineer *Oct 2026 - Present*
Codex Solutions *codexsolutions.io*

- Migrated a client project's backend from a single app to a microservice architecture of four independently deployable processes: a REST API, a Socket.IO gateway, a push notification service and a cron service
- Connected the services through Redis-backed message queues (BullMQ) so each part can be deployed and scaled on its own
- Introduced Redis caching and dependency injection throughout the codebase

Backend Engineer *July 2026 - Present*
Lalengi *Remote*

- Designed and built the backend of a super app for food, groceries, shopping, taxi rides and parcels from the ground up, owning the architecture, infrastructure and DevOps
- Designed the PostgreSQL database schema across 297 tables
- Built the NestJS API that handles every write, plus a separate WebSocket gateway that pushes live events, such as driver location on the map, to six client apps
- Built background workers on BullMQ and Redis for job queues and scheduled tasks

Team Lead, Software Engineer *March 2023 - March 2026*
Learnio AS *Remote (Norway)*

- Promoted to team lead eight months after joining as a software engineer
- Led Inzpiri, an online education platform for teachers and students, running a cross-functional team of designers, developers and stakeholders
- Worked across the stack, from Vue and React front ends to Node.js and Go services backed by MongoDB and Redis, deployed on AWS
- Ensured best practices in code quality, version control (Git) and continuous integration across the full development lifecycle
- Given high honor for finishing the most tasks efficiently throughout the whole year of 2025 among all the engineers

Software Engineer *June 2021 - March 2023*
Dev Centre House *Remote (Ireland)*

- Developed and maintained the backend of the SEEYOU chat platform, utilizing RabbitMQ, Redis, and scalable messaging architecture
- Built Slack and Telegram integrations that carried messages between SEEYOU and those platforms in real time
- Led the development of a backend proxy server for Smart Pricer, improving data handling and API performance
- Recognized twice as Employee of the Month for exceptional technical contributions and leadership
- Selected for the elite internal "Navy SEAL" team at DCH, an honor reserved for top-performing developers known for reliability, innovation, and work ethic

EDUCATION

Diploma in Information Technology *Nov 2018 - March 2020*
Computer Science Institute *Sulaymaniyah, KRG, IQ | GPA: 3.7*

SKILLS

Languages: JavaScript, TypeScript, Go, Rust, Swift, Kotlin, SQL, HTML, CSS
Backend: Node, Bun, NestJs, Express, Fastify, Axum, REST API Development, WebSockets, Socket.IO, Microservices, BullMQ, RabbitMQ
Data: PostgreSQL, MongoDB, Redis, DynamoDB, Database Design
Frontend & Mobile: React, React Native, SwiftUI, Jetpack Compose, Vue, Next.js, Tauri, PWA, Dexie (IndexedDB)
Infrastructure & Practices: AWS, AWS Lambda, Docker, WireGuard, DevOps, CI/CD, Git, Test Driven Development

PROJECTS

Qasa *qasa-app.com | github.com/Ali559/Qasa*

A local-first password manager for iOS and Android, paid for through Iraqi wallets. The vault is encrypted on the device and never leaves it; the server only meters devices and sells Premium features (WireGuard VPN, more devices, breached-password check). Built solo end to end: a Rust API and background worker, a VPN node agent that keeps WireGuard peers in sync, native iOS and Android apps and a Vue admin dashboard.

Tech Stack: Rust, Axum, PostgreSQL, WireGuard, Swift, SwiftUI, Kotlin, Jetpack Compose, Vue, Caddy, Cloudflare Tunnel

Zankoline *zankoline-pwa.vercel.app*

A university admission guide for students in Kurdistan. Students enter their grade, see which programs they can realistically get into, rank their choices and print the admission form. Runs fully offline as a PWA in English and Sorani, with no backend and no account.

Tech Stack: React, TypeScript, Dexie, PWA, IndexedDB

Inzpiri *beta.inzpiri.com*

Online Education Platform for Teachers and Students.

Tech Stack: Go, Vue, TailwindCSS, AWS, Git, Figma, MongoDB, Docker, Redis, TypeScript, Vite, Github

Wizrx *masterwizr.com*

Real-time chat for a collaboration tool designed to streamline communication and strengthen internal connections in businesses.

Tech Stack: React, JavaScript, TypeScript, NestJs, MongoDB, Redis, AWS, Socket.io, PostCSS

Smart Pricer *smart-pricer.com*

Ticketing and Price Analytics as well as Dynamic Pricing based on Data Science for Ski Resorts, Sports, Cinema and Entertainment.

Tech Stack: Node, Express, TypeScript, MongoDB, Proxy, Redis, Swagger

SEEYOU *seeyou.eu*

A Modern All in one Communication Platform for Teams and Individuals.

Tech Stack: Node, Express, TypeScript, RabbitMQ, Redis, SQL, Swagger, WebSockets

Strongly typed Env *npmjs.com/package/strongly-typed-env*

A type-safe environment configuration library for Node.js that generates TypeScript types from your .env files.

Tech Stack: Node, CI/CD, Semver, TypeScript, NPM

CDN Checker *VS Code Marketplace*

A Visual Studio Code extension that finds broken, redirecting, or oversized external links in your project files.

Tech Stack: Node, TypeScript, VS Code Extension API

AWARDS

Critical Thinking and Creative Problem Solving - Global Solutions (Nov 2019)

Demonstrated ability to identify issues and evaluate options to reach solutions. Endorsed by the Global Solutions virtual exchange program, implemented by IREX and supported by the Stevens Initiative.

Adaptability - Global Solutions (Nov 2019)

Demonstrated ability to recognize and adjust to changes in people, places, and circumstances. Endorsed by the Global Solutions virtual exchange program.

Virtual Collaboration - Global Solutions (Nov 2019)

Demonstrated ability to work effectively and respectfully with others, including coordination, collaborative decision making, and communication within teams. Endorsed by the Global Solutions virtual exchange program.
